PREFACE

.....

This publication presents population and dwelling counts from the 1996 Census of Population and Housing for selected areas within the Northern Territory.

Detailed characteristics from the 1996 Census are being released in two stages. The first release consists of demographic, social and housing data. The second release, comprising family and labour force related data, will be provided progressively State by State from August 1997.

Estimated Resident Population (ERP) is the best indicator of the population that is usually resident in an area. The ERP is based on Census usual residence counts. Census counts are available either on the basis where people were counted (enumerated) on Census night or where they usually live (usual residence counts).

The ERP provide the official population estimates for Australia.

Except for Table 1, the data presented in this publication relate to where people were **enumerated** on Census night. Table 1 also contains estimates of the Territory's **resident** population which are based on Census counts by place of usual residence. Estimated Resident Population (ERP) data are derived from the Census usual residents count by adjusting for:

- the number of Australians overseas;
- estimated underenumeration; and
- births, deaths and migration between 30 June and 6 August 1996.

Census data presented in this publication represent only a selection of the full range of statistics that could be derived from the Census. For further information about other Census or ABS data refer to page 25 — Census Products and Services or the *Directory of Census Statistics* (Cat no. 2910.0). Concepts and definitions used in this publication are outlined in the Explanatory Notes and more detailed information is available in the *Census Dictionary* (Cat no. 2901.0).

Zia Abbasi
Regional Director, Northern Territory

SUMMARY OF FINDINGS

.....

TERRITORY OVERVIEW

- Census counts are on a 'place of enumeration' basis, which provides a count of people where they were located on census night.
- Territorians who were holidaying or attending to business interstate or overseas on Census night are not included in the Census counts for NT in this publication. They are included in official population estimates (ERP) in Table 1.
- There were 195,101 people counted in the Territory on 6 August 1996, an increase of 10.9% from the 1991 count of 175,891. Total dwelling stock increased 13.5%, from 54,033 to 61,316.
- Overseas and interstate visitors to the Territory contributed substantially to the total population counted in the Northern Territory. On 6 August 1996 there were 23,904 visitors to the Territory. Of these, 5,736 were from overseas and a further 18,168 were from interstate.
- There were 7,639 fewer females than males in the Territory on census night (93,731 females and 101,370 males).
- Persons who identified as Aboriginal and/or Torres Strait Islander totalled 46,277. This is an increase of 6,367 or 16.0% since 1991.
- The number of people who reported being of Indigenous origin comprised 23.7% of the total Northern Territory population.
- The median age of the Territory's population was 28 years, compared to 33 years for Australia.
- The Northern Territory population was 1.1% of the Australian total of 17,892,423.

CENTRES WITH OVER 10,000 POPULATION

- There were 72,622 persons in 24,979 dwellings enumerated in the Darwin Local Government Area, which comprises Darwin City and suburbs (29 Statistical Local Areas), a 3.6% increase in population and a 5.9% increase in dwellings since 1991.
- There were 27,092 people enumerated in Alice Springs, 5.9% more than in the 1991 count. Of this total, 3,682 people were usually resident interstate or overseas.
- The Litchfield Shire which embraces Darwin's rural hinterland, experienced significant growth between 1991 and 1996 in both population and dwellings counted. The 1996 Census count was 13,858 persons in 5,091 dwellings, increases of 42.2% and 44.2% respectively.
- Palmerston Local Government Area experienced strong growth between 1991 and 1996. The population increased by 63.4%, and dwellings by 72.3%. The gazetted suburbs of Driver, Gray, Moulden and Woodroffe, together with the 'balance of Palmerston', returned a Census population of 12,750. The equivalent count in 1991 was 7,804. Dwelling totals rose from 2,565 in 1991 to 4,420 in 1996. Official estimates (ERP) show Palmerston's population to be 13,100 at 30 June 1996.
- Katherine Municipality returned a census population of 10,809, an increase of 15.3% over the 1991 total. Dwelling stock increased 12.5% to 3,435. Of Katherine's Census population, 1,877 were visitors, i.e. they were usually resident interstate or overseas.
- These five population centres of 10,000 and above accounted for 137,131 persons or 70.3% of the census population of 195,101.

CENTRES WITH 1,000 - 10,000 PERSONS

- There are eleven Northern Territory centres which fall in this population range. Four are Community Government Councils established under the Northern Territory Local Government Act (Yulara, Coomalie, Nguiu and Yugul Mangi); one, Tennant Creek, is a Local Government Council under the same legislation; three are incorporated under the Associations Incorporation Act (Maningrida, Kardu Numida and Galiwinku); Nhulunbuy is established under the Companies Act; Jabiru is established under the Jabiru Town Development Act and Alyangula (population 1,231) is a mining town on Groote Eylandt.
- 21,086 or 10.8% of the census population were enumerated in these centres.

SUMMARY OF FINDINGS *continued*

CENTRES WITH UNDER 1,000 POPULATION

- Population centres under 1,000 persons are incorporated either as Community Government Councils or Incorporated Associations. Census 96 enumerated 20,754 persons in 55 such centres with individual populations between 120 and 1,000. Of these persons, 17,279 (83.3%) were Indigenous.
- Persons enumerated in centres with less than 1,000 population comprised 10.6% of the total census population.

RESIDUAL POPULATION

- The balance of the Northern Territory census population (16,130 persons or 8.3%) was enumerated at such places as:
 - ♦ small and generally remote outstations,
 - ♦ pastoral properties and farms,
 - ♦ areas surrounding but outside the boundaries of towns and municipalities (e.g. Katherine surrounds, Alice Springs surrounds),
 - ♦ tourist destinations (e.g. Kings Canyon, Litchfield Park, Ormiston Gorge, Kakadu National Park),
 - ♦ mining operations (e.g. Tanami, Granites, McArthur River, Mount Todd), and
 - ♦ off-shore and migratory collection districts.

(a) Non-private dwellings are establishments which provide a communal type of accommodation. Examples are hotels, motels, hospitals and residential colleges.

EXPLANATORY NOTES

.....

SCOPE AND COVERAGE

1 The 1996 Census of Population and Housing was held on 6 August 1996. The first Census was held in 1911 and since 1961 a Census has been taken every five years, a frequency which is specified in the *Census and Statistics Act 1905*. The object of the Census is to measure accurately the number and key characteristics of people in Australia on Census night, and the dwellings in which they live.

2 The Census aims to count every person who spent Census night in Australia. The only group of people who spend Census night in Australia but are excluded from the Census are foreign diplomats and their families.

3 All private dwellings, except diplomatic dwellings, are included in the Census, whether occupied or unoccupied. Caravans in caravan parks, manufactured homes in manufactured home estates and self-care units in accommodation for the retired or aged are counted only if occupied. Occupied non-private dwellings, such as hospitals, prisons, hotels, etc. are also included.

4 Details about the 1996 Census content, collection operations, confidentiality and privacy protection, processing and evaluation activities are contained in *1996 Census of Population and Housing: Nature and Content of the Census* (Cat. no. 2008.0).

ABS POPULATION ESTIMATES

5 This publication mainly contains population counts based on where people were counted on Census night, which may not have been where they usually lived. The Census can provide person counts based on place of usual residence at the geographic level of Statistical Local Area (SLA).

6 Official ABS population estimates (estimated resident population) are also separately available from the ABS. The estimates are based on Census counts that have been adjusted to:

- include people who were in Australia on Census night but were missed in the Census;
- include Australian residents who were temporarily overseas on Census night (these people were not within scope of the Census); and
- exclude overseas visitors counted in the Census who were not usual residents of Australia.

7 The adjusted Census count is then updated quarterly using demographic statistics. These are statistics on births, deaths and overseas and internal migration.

8 ABS population estimates are published in *Australian Demographic Statistics* (Cat. no. 3101.0) produced quarterly, and in *Estimated Resident Population by Age and Sex* (Cat. no. 3201.0) produced annually.

9 The ABS also provides projections (based on different assumptions as to future fertility, mortality and migration) of the resident population of Australia, States and Territories. These projections are published biennially in *Projections of the Populations of Australia, States and Territories* (Cat. no. 3222.0).

EXPLANATORY NOTES

continued

CENSUS VARIABLES

Age and Sex

10 The 'age' variable refers to a person's age at last birthday. The 'sex' variable identifies each person's sex. These data are collected for each person. If age or sex are not stated they are imputed.

Indigenous

11 A person is defined to be of Indigenous origin if he or she identifies himself or herself as of Aboriginal and/or Torres Strait Islander origin.

Place of Usual Residence

12 This variable identifies a person's place of usual residence on Census night. Usual residence is defined as '...that address at which the person has lived or intends to live for a total of 6 months or more in 1996'.

Dwelling Structure

13 This variable records the type of structure of all private dwellings enumerated in the Census, and includes occupied caravans and improvised dwellings. The information is recorded by the Census Collector on the back of the household form.

Non-private dwellings

14 Non-private dwellings are establishments which provide a communal type of accommodation. Examples are hotels, motels, hospitals and residential colleges.

DATA LIMITATIONS

15 Census data are subject to a number of inaccuracies resulting from errors by respondents or mistakes in collection or processing. Whilst many of these are corrected by careful processing procedures, some still remain. The effect of the remaining errors is generally slight, although it may be more important for small groups in the population. The main kinds of error to keep in mind are:

- *Partial non-response:* In some cases where an answer is not provided to a question an answer is imputed (often from other information on the form). In other cases a 'not stated' code is allocated.
- *Processing error:* While such errors can occur in any processing system, quality management is used continuously to improve the quality of processed data, and to identify and correct data of unacceptable quality.
- *Random adjustment:* Table cells containing small values are randomly adjusted or suppressed to avoid releasing information about particular individuals, families, or households. The effect of these adjustments are statistically insignificant.
- *Respondent error:* Because processing procedures cannot detect or repair all errors made by people in completing the forms, some remain in final data.
- *Undercount:* Although the Census aims to count each person, there are some people who are missed and others are counted more than once. The Census data in this publication are not adjusted for the net undercount.

16 Further information on data quality is provided progressively in *Census Update* and in *1996 Census Data Quality Working Papers*.

GEOGRAPHIC AREAS

17 Data in the tables in this publication are presented either at the Collection District (CD) level, aggregated where appropriate for Darwin Rural Areas, Community Government Councils (CGCs) and Incorporated Associations; the Statistical Local Area (SLA) level, aggregated to Statistical Subdivision (SSD) and Statistical Division (SD) levels; the Local Government Area (LGA) level; or for the whole of the NT.

18 The codes and names of the geographic areas are defined by the Australian Standard Geographical Classification (ASGC). Changes that occur following the regular review of this classification, are detailed in *Statistical Geography, Volume 1 Australian Standard Geographical Classification, 1996 Edition* (ABS catalogue number 1216.0).

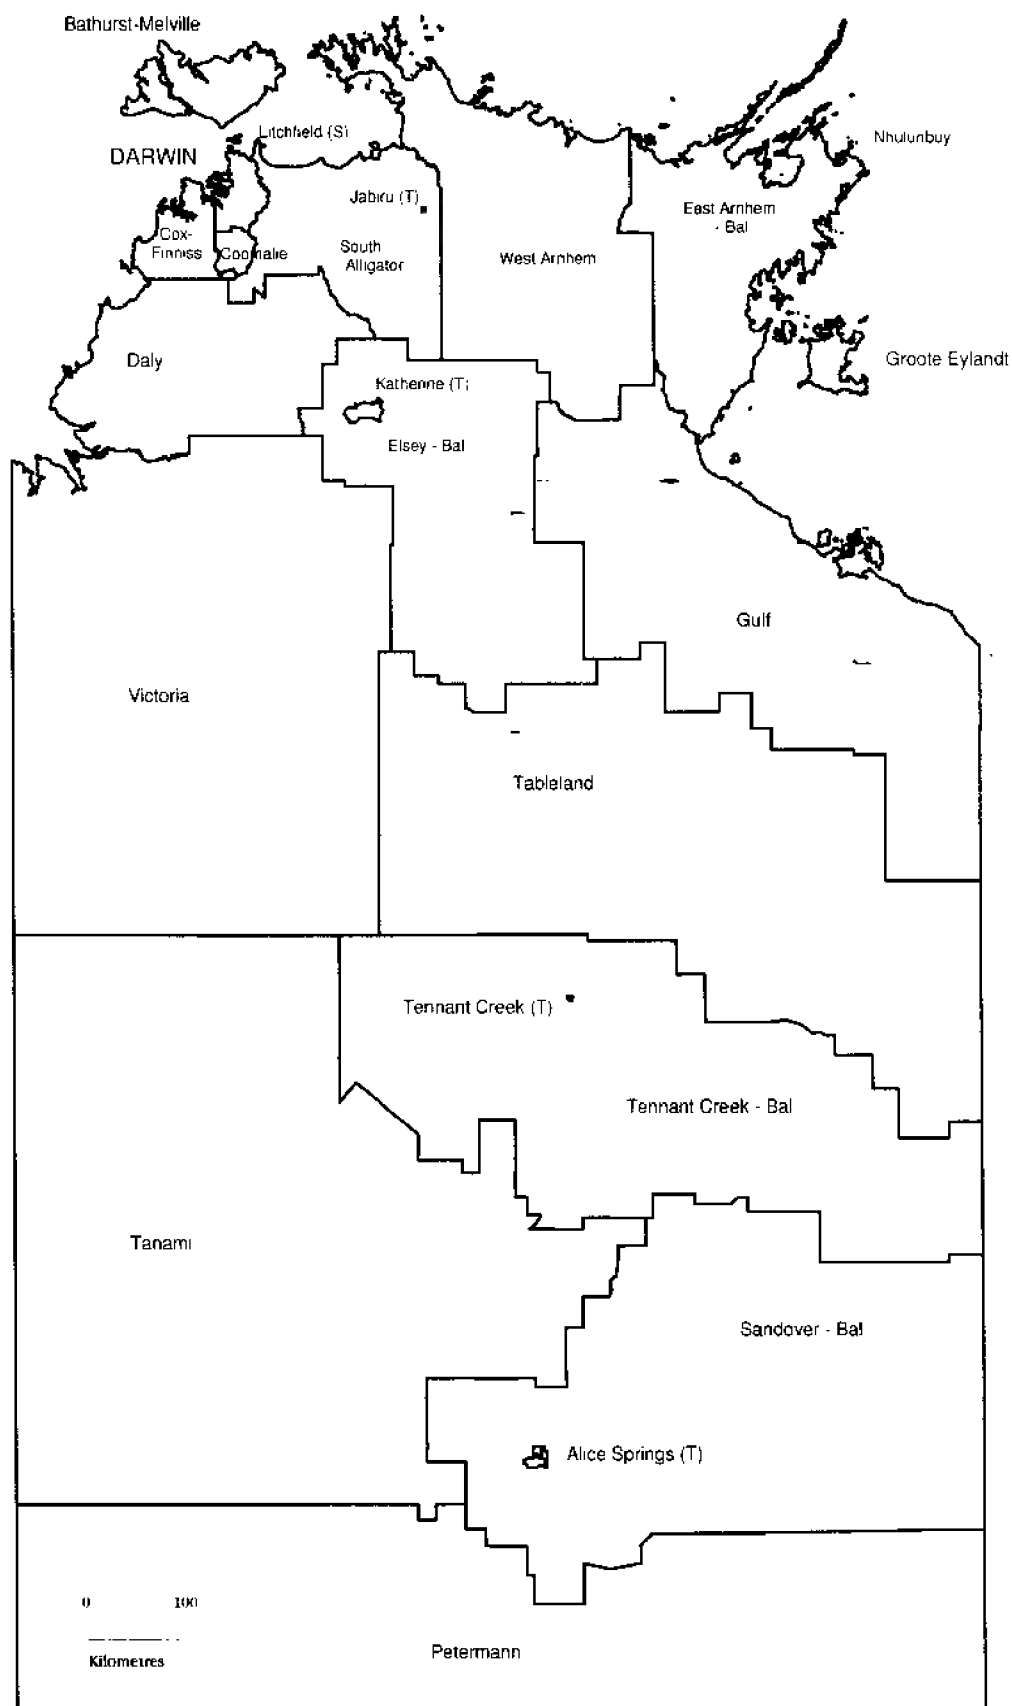

19 The principal geographic area change in the Northern Territory from 1991 was the splitting of Alice Springs into 5 SLAs where previously there was only one. SLAs in Darwin and Palmerston remain equivalent to gazetted suburbs.

20 One or more discrete Collection Districts were allocated to each of the Community Government Councils and Incorporated Associations.

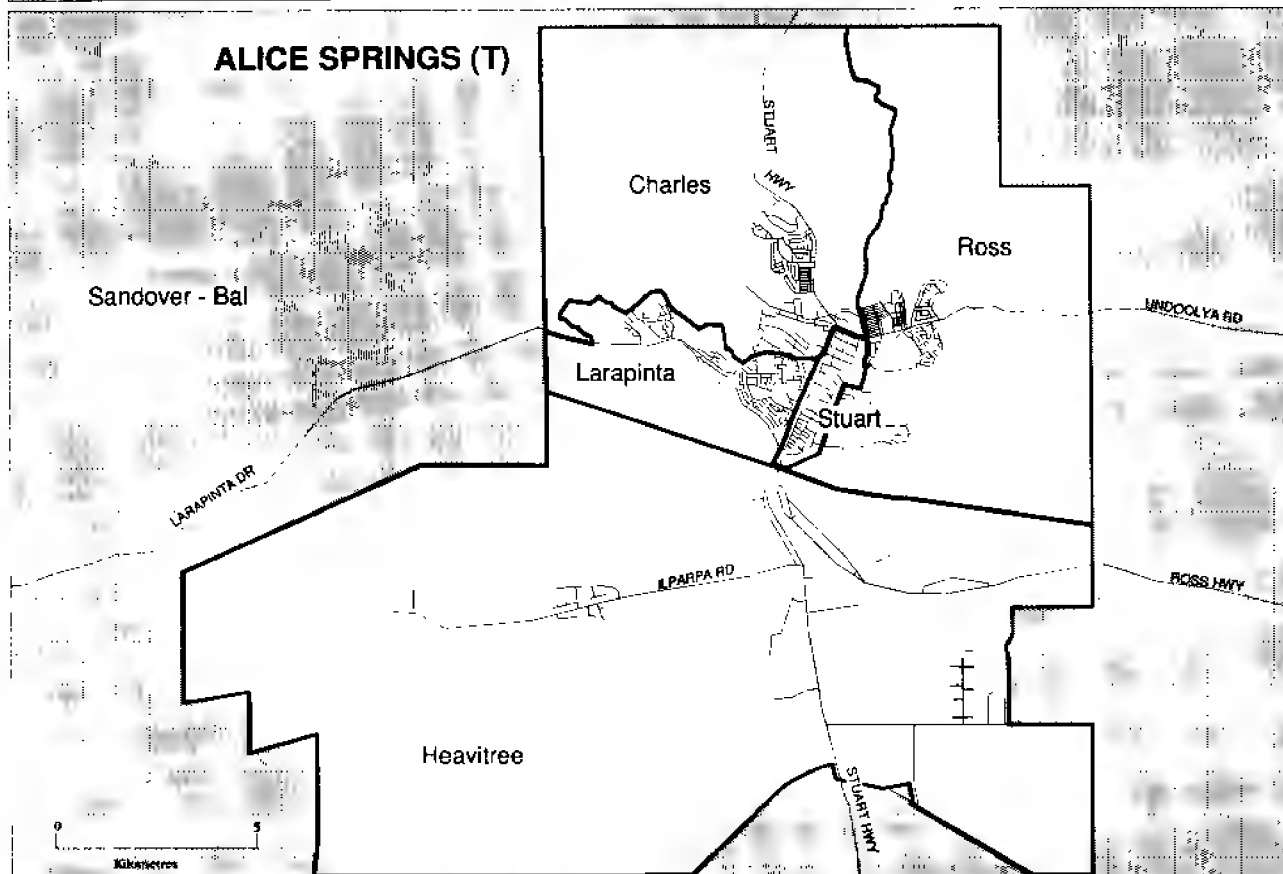

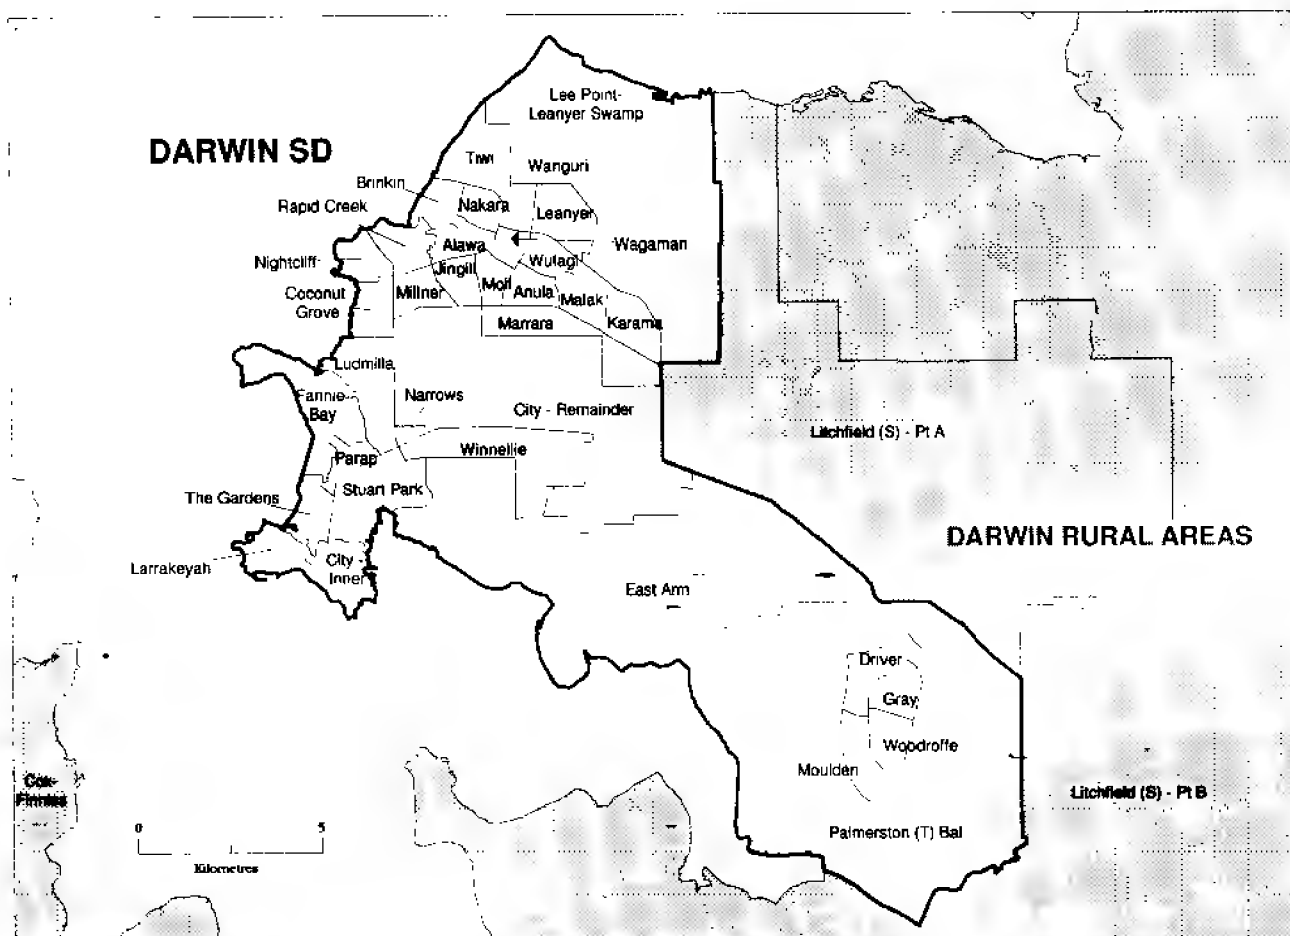

21 Abbreviations and other usages:

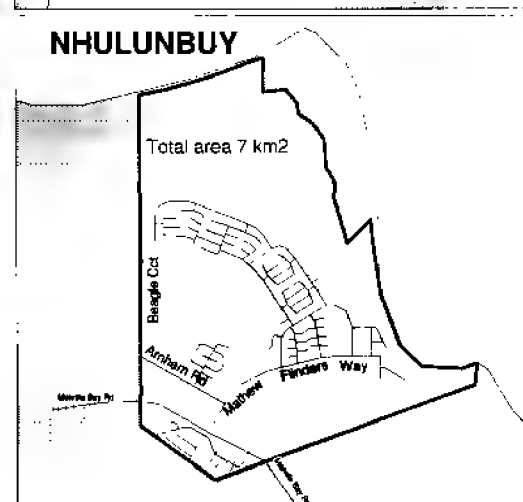

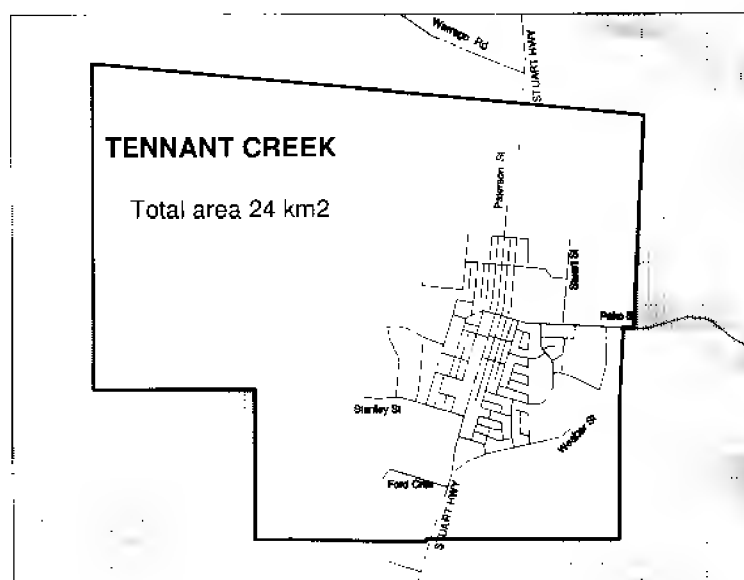

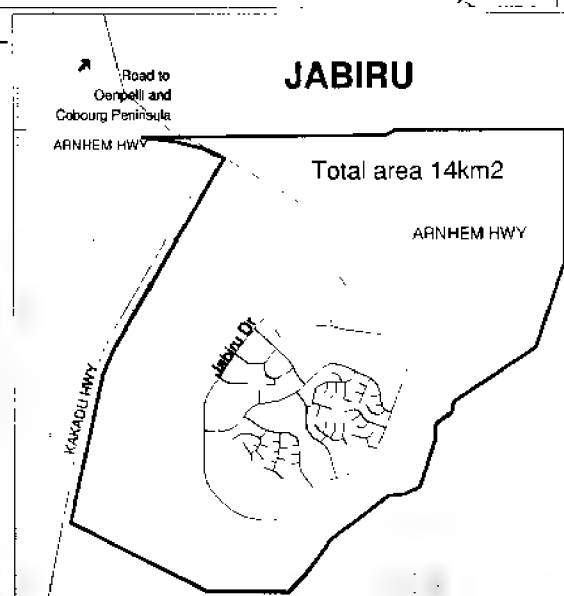

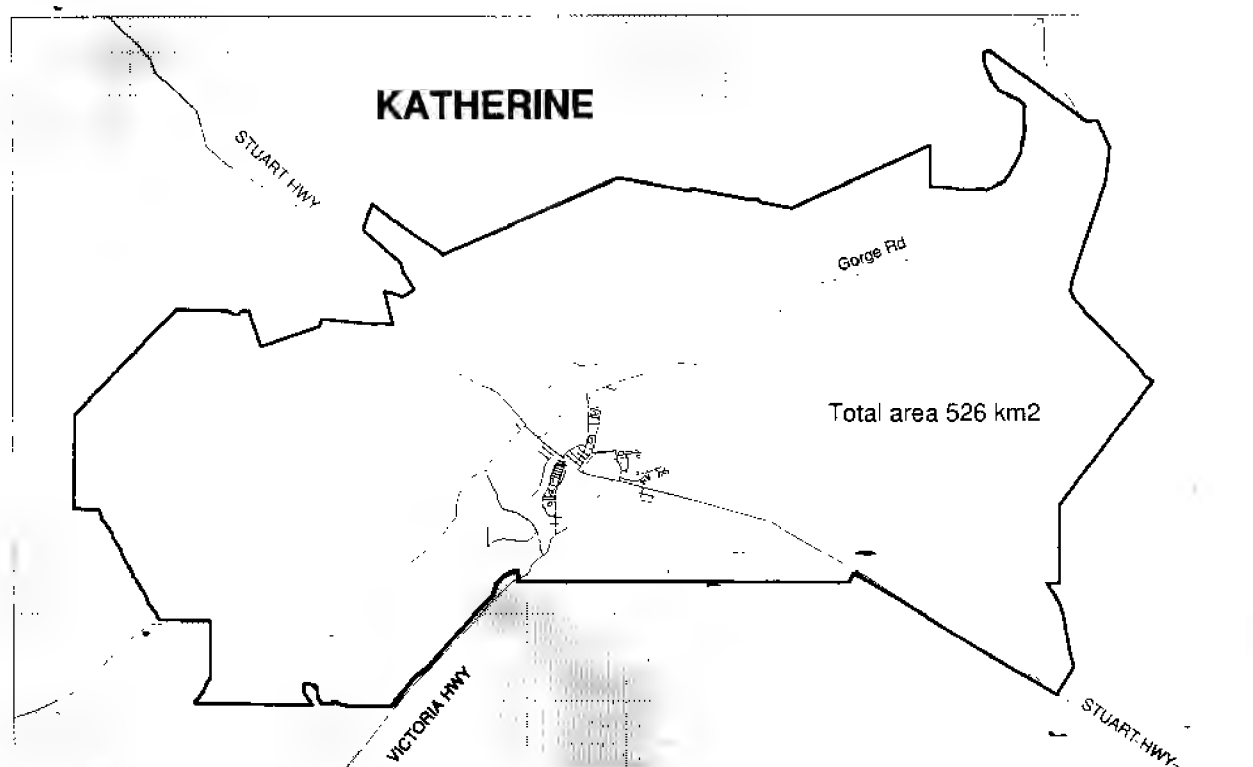

ASGC	Australian Standard Geographic Classification
SD	Statistical Division
SSD	Statistical Subdivision
SLA	Statistical Local Area

4706.0.15.001	Indigenous Geography Hierarchy

CDATA96

CDATA96 provides Census data for all of Australia, from approximately 200 households to an entire State or Territory. You can select data and geographic areas and view the results as:

• Tables • Maps • Graphs

What you get with CDATA96

- Basic Community Profile, first release data (at CD level and above)
- 1996 Digital Statistical Boundaries
- Digital Base Map data
- 1986 & 1991 Census data (at SLA level on 1991 boundaries)
- MAPINFO software

In addition, CDATA96 will include the following data when they become available:

- Basic Community Profile, second release data (at CD level)
- 1996, 1991, 1986 Time Series Profile (at SLA level) on 1996 boundaries
- Time Series Profile (at SLA level)
- Additional boundary data (Urban Centre/Locality and Electoral Division Boundaries)
- Interface for all other Community Profiles

All other Community Profiles - Working Population, Usual Residents, Indigenous and Expanded will be available as separate modules, individually priced, in formats suitable for direct import into CDATA96.

CENSUS KEYDATA

ABS Catalogue 2023.0

CENSUS KEYDATA is a CD-ROM containing a large volume of tabulated Census data and digital boundary data which can be exported for use with industry standard software packages. CENSUS KEYDATA has been designed to provide fast, easy access to the 1996 Census Community Profiles and Census boundaries which are stored on the CD-ROM in an encrypted format, for use with your own tabulation or mapping software. In addition, reference data such as the Census Dictionary, and information about all 1996 Census products and how to order them are also provided.

An option for regional data

CENSUS KEYDATA provides an option for clients or organisations requiring regional data, such as local governments, regional authorities, schools and Government agencies operating on a regional basis, who prefer to use their own software, or who do not require the extensive software functionality offered by CDATA96.

Instant access to Community Profiles and Statistical Boundaries

With CENSUS KEYDATA you will be able to select any number of Community Profiles or Census boundaries and generate an order form. The total price for the order is calculated automatically. On receipt of your order and payment details, the ABS will supply you with a unique decryption key which will allow you to download the selected data from the CD-ROM onto your network or hard drive. If, at a later stage, you require additional data, you can select and order in the same way, and an additional decryption key will be provided. All reference data on CENSUS KEYDATA is accessible free of charge.

Exporting the data

You will be able to export the statistical data in a format suitable for use with most PC-based spreadsheet software packages. The boundary data are provided in MapInfo format which can be used with MapInfo or spreadsheet packages containing MapInfo-based software such as MapInfo Desktop or Excel V7. If preferred, you will be able to access the standard ABS-developed software which is stored unencrypted on the CD-ROM free of charge. This software enables you to manipulate, view, print and export the decrypted data.

CLASSIFICATION COUNTS

Available from September 1997

The 1996 Classification Counts provide frequency counts for 1996 Census variables in full classificatory detail, available for each state or capital city. These are cross-classified by sex where applicable. Classification Counts consist of a column for each State or Capital City Statistical Division, containing counts for all categories within most 1996 Census classifications, allowing comparison of states and capital cities Australia-wide.

The first release will provide counts for all easy to process topics including age, birthplace, language, income, religion, dwelling type, rent, and housing loan repayment. The second release will include family characteristics and counts for industry of employment, labour force status, occupation, travel to work, education and usual residence data.

CUSTOMISED TABLES SERVICE

The Customised Tables (Matrix) Service allows clients maximum flexibility in the selection of Census variables and geographic areas.

If standard 1996 Census products and services cannot meet a particular user's needs, a customised matrix may be ordered. The Customised Tables Service provides cross classified tables tailored to a user's needs on a variety of media. Any combination of Census variables for any geographic area can be selected. Consultants are available to assist with table specifications to obtain an optimum outcome.

Matrixes can be provided in hard copy or electronic formats suitable for a range of spreadsheets and databases. Manipulation software, operating in a Windows environment, is included (where needed) free of charge with all matrixes output in electronic form. This software enables clients to view, select, print and export selections from the matrix.

THEMATIC PROFILE SERVICE

Available from September 1997

The Thematic Profile Service is a new service designed to meet the demand for a census product that provides more subject matter specific data than the standard profiles. All Profiles comprise sets of tables containing key census characteristics of persons, families and dwellings which cross-classify census variables at a range of geographic areas from Collection District (CD) to total Australia.

Thematic Profiles are a set of tables based on a particular topic. Each Thematic Profile focuses on a particular population group.

FAMILY THEMATIC PROFILE

Examines issues like living arrangements for children, family income, housing, transport, employment and mobility. The tables give small area demographic and socio-economic characteristics for both persons and families. The Family Profile complements family data from the Census already released through the basic profiles. The Family Thematic contains 26 tables.

YOUNG PEOPLE THEMATIC PROFILE

Provides information on people aged 12-25 years. The tables examine issues relevant to young people including living arrangements, education, employment and mobility. The Young People Thematic contains 17 tables and additional data on young people is also available in the Family Profile.

OLDER PEOPLE THEMATIC PROFILE

Examines the living arrangements of older people and their type of accommodation. As well, the tables provide information on income, employment, transport, ethnicity and mobility. The Older People Thematic contains 13 tables and extensive data on older people is also available in the Family Profile.

ETHNICITY THEMATIC PROFILE

The Ethnicity Thematic contains 19 tables and examines issues of relevance to Australia's ethnic population, such as education, employment and housing. In addition, all thematic profiles will be available for particular population groups. These could be specified, for example, by country of birth, language spoken at home, or religion.

ABS Products and Services

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the ABS Catalogue of Publications and Products.

Many standard products are available from ABS bookshops located in each State and Territory. In addition to these products, information tailored to the needs of clients can be obtained on a wide range of media by contacting your nearest ABS Office. The ABS also provides a Subscription Service for standard products and some tailored information services.
